5mm Round Standard T-1 3/4 Type Infrared LED Technical Data Sheet

Part No.: DL-503IRTA-2IR45

### Features:

- 1. Standard T-1 3/4 diameter package.
- 2. Low forward voltage.
- 3. Viewing angle=45°.
- 4. Reliable and rugged.
- 5. The product itself will remain within RoHS complaint Version.

# • Descriptions:

1. The device is spectrally matched with silicon photodiode and phototransistor.

## • Applications:

- 1. Floppy disk drive.
- 2. Optoelectronic switch.
- 3. Camera.
- 4. Free air transmission system.
- 5. Video.

• Package Dimension:

# $\begin{array}{c} & & & & & \\ \hline 0.5 & & & & \\ \hline 0.6 & [0.024] \\ \hline 0.5 & [0.020] \\ \hline 0.5 & [0.02$

| Part No.         | Chip Material | Lens Color       | Source Color |  |
|------------------|---------------|------------------|--------------|--|
| DL-503IRTA-2IR45 | GaAlAs        | Blue Transparent | Infrared     |  |

2.54 [0.100]

Notes:

- 1. All dimensions are in millimeters (inches).
- 2. Tolerance is ± 0.25 mm (.010") unless otherwise specified.
- 3. Protruded resin under flange is 1.00 mm (.039") max.
- 4. Specifications are subject to change without notice.

| Absolute Maximum Ratings at Ta=25                            |        |  |      |  |  |  |

Notes:

- 1. Luminous (Radiant) Intensity Measurement allowance is ± 10%.
- 2.  $\theta_{1/2}$  is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- The dominant wavelength (λp) is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.

### Please read the following notes before using the product:

1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

2. Storage

2.1 Do not open moisture proof bag before the products are ready to use.

2.2 Before opening the package, the LEDs should be kept at  $30^\circ$ C or less and 90% RH or less.

2.3 The LEDs should be used within a year.

2.4 After opening the package, the LEDs should be kept at  $30^{\circ}$ C or less and 70% RH or less.

2.5 The LEDs should be used within 168 hours (7 days) after opening the package.

3. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than  $260^{\circ}$ C for 5 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

4. Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
